DETAILED ACTION

Due to personnel changes at the U.S. Patent and Trademark Office, this application has been transferred to a new examiner of record. After a search of pertinent prior art, the Odland and Wagner Patents are considered relevant to the prosecution of the pending claims. Accordingly, the following rejections are presented for review and response.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000.

Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 28, 46, and 61 are rejected under 35 U.S.C. 102(e) as being anticipated by Odland. The Odland Patent shows in figure 3 below, a probe comprising a proximal probe opening providing access to a supply line and a drainage line; a distal probe tip for introducing the probe into subcutaneous tissue, a supply line for introducing drip-feed solution into the probe, a drainage line; a dialysis section being formed between the supply line and the drainage line; the drip-feed solution flowing through the supply line in a flow direction, the flow direction being reversed in the area of the dialysis section and between the supply line and the drainage line.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 29-45, 47-60, and 62-75 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Odland in view of Wagner**. The examiner of record would like to point out that using the term "star" to describe the profiles of the probe is considered a vague description of the structural characteristics of the probe lumens. Recognizing that there are no identical stars in the universe, it would not be unreasonable to contend that unless there is an express structural description of the star shapes in the claims, the teachings of the cited patents would be enough motivation to considered the disclosed profiles conventional in the art of probes. Accordingly, for a person of ordinary skill in the art, the disclosed profiles would have been considered obvious design alternatives.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Manuel Mendez whose telephone number is 703-308-2221. The examiner can normally be reached on 0730-1800 hrs.
